

SERVICE 2

GUIDANCE

Dispatchers and truck drivers can now see how many parking places are still available, at any given moment, at all (guidance enabled) truck parking sites throughout Europe — via the internet and via on-board computers. And this service is free.

Truck parking areas continually provide dynamic (real time) data on parking availability...

Truckinform portal

...and the portal checks data quality, and sends it on...

...for distribution via the internet and on-board computers.

Truckinform is one single platform containing a unified, detailed, and up-to-date inventory of European truck areas. It comprises the following three services:

1. **Information** about 2'500 truck parking areas in 40 European countries – growing and changing daily!
2. **Availability/guidance**, where users will be directed to the next available and appropriate truck parking place
3. **Reservation**, where it becomes possible to book a truck parking space in advance.

USER-FRIENDLY, MULTI-PLATFORM, TRANS-EUROPEAN

DRIVERS/DISPATCHERS

no time wasted going to an already full parking facility

As you (the driver) reach your drive-time limit, you can optimise your time and efficiency by precisely knowing which parking areas have available space. You can use Truckinform.eu to be guided to the next facility that actually has truck parking available.

TRUCKSTOP OPERATORS

it is easy to provide real time availability information

Contact Truckinform (support@truckinform.com, or fax +41-44 286 66 30) to become real-time-enabled, which is easier than you might imagine: Truckinform simply receiving a periodic SMS from your warden (example “34” for 34 still free), to a local park management system (LPMS); or the data comes from an automatic detection device; or via a web form.

As drivers approach their drive-time limits they are likely to give preference to stopping at parking sites where they know in advance that parking space is available.
